Factoring Polynomials Worksheets

Sometimes it is impossible to factor a polynomial by finding the greatest common factor. For instance, the polynomial $(3xy - 24x^2 - 7y + 56x)$ has no greatest common factor. In this case we can try searching the polynomial for factors that are common to some of the terms. Then we can

Factoring By Grouping. When an expression has an even number of terms and there are no common factors for all the terms, we may group the terms into pairs and find the common factor for each pair: Example: Factorize the following expressions: a) $ax + ay + bx + by$ b) $2x + 8y - 3px - 12py$ c) $3x - 3y +$
