Section 15.1 Energy and Its Forms An object at ground level has a gravitational potential energy of zero, no matter how great its mass. At a height of 1 meter, a 1-kilogram object has potential energy of: $PE = 1 \text{ kg} \cdot 9.8 \text{ m/s}^2 \cdot 1 \text{ m} = 9.8 \text{ J}$ Doubling either the mass or the height of the object will double its gravitational potential energy.
