For single phase applications, single phase inverter is used. There are mainly two types of single-phase inverter: Half Bridge Inverter and Full Bridge Inverter. Here we will study how these inverters can be built and will simulate the circuits in MATLAB. Half Bridge Inverter. This type of Inverter requires two power electronics switches (MOSFET).

2. IGBT overcurrent / short circuit protection In designing the IGBT, the current is usually given a margin of more than 10%. However, when the power inverter is working, due to the short circuit of the component and load, the load side fault causes overcurrent, and the load side has a particularly large inductive load.
